

Marine and Saltwater Coatings, Insulation and Repair

Above the water or below, our products are very effective in protecting steel, aluminum, wood or fiberglass. Our ultra-high strength, elastomeric, polyuria coatings simply outperform epoxy, polyurethane, UHMW polyethylene and other hybrid products. It has excellent resistance to most chemicals and hydrocarbons. With its higher elongation and flexibility, it is able to withstand substrate expansion and contraction caused by harsh weather cycles. It is also more abrasion and impact resistant than any other coating.

What We Can Do

Jet Boat hull and Bottom Protection

An upgrade to UHMW and HDPE sheets, being lighter and stronger. The U.S. military uses it on their boats and on their HUM V's to protect their troops, so imagine what it can do for your jet boat.

Koi or any type of fishing pond

Our pond liners are 100% solids and VOC free and can be potable water approved. They are monolithic and seamless, impact, abrasion, chemical and UV resistant. Stray Cat's liners are ISO9001 certification, meets Green Chemistry, and is DEP/NSF approved. With the elasticity, strength, flexibility and durability, our liners are the perfect solution for Koi or fish pond liners.

Commercial Fishing Boats

Typical protective uses on a commercial fishing boat

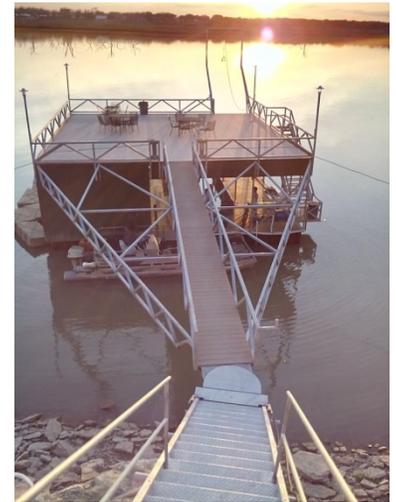

- *Fish hold liners*
- *Hull protection and bilge liners*
- *High impact deck areas where fishing and offloading activities occur. Where decks take a beating from crane hooks, steel blocks, shackles, etc.*
- *For nonslip deck or floor coatings*
- *Any place where there is corrosion, abrasion wear or for tear protection in cargo handling areas.*
- *The sides of your boat where crab traps, anchors, etc cause damage*

Encapsulation and Protection of Dock Floats

For maintenance free, easy to clean floating docks that are going to last you a lifetime, contact us. Our coatings are 100% solids, VOC free environmentally friendly protection.

Aquaculture Tank Linings

For a smooth, waterproof and durable liner that prevents deterioration and protects the substrate while providing a surface that won't injure the marine life, we have the best solution on the market today.

Coating or Restoring Pilings

Above or below the water, we have the perfect protection of wharf pilings from the corrosive residue of the harsh marine environment. With its high tensile strength and corrosion resistant properties, Stray Cat's polyurea provides a tough barrier that prevents marine borer species from penetrating the coating and accelerating any damage to the pier pilings. We will provide a durable protective coating that will considerably increase their service life and provide savings for years to come
